# "Crazy Lines" Addon Documentation

Are you a fan of the wacky, over-the-top animation style of "Ed, Edd n Eddy"? Do you want to add some wild and zany designs to your 3D models in Blender? Look no further than the Crazy Lines plugin! This powerful tool allows you to easily add crazy lines to any object in your Blender scene, just like the ones seen in the beloved animated series. Simply select the object you want to modify, and the plugin will automatically generate a series of wavy, zig-zag, or spiral lines that wrap around it.

But the Crazy Lines plugin isn't just for replicating the style of "Ed, Edd n Eddy." It's a versatile tool that can be used in a wide range of creative endeavors. Whether you're working on a 3D model for a video game, an animated short film, or just want to add some flair to your personal projects, the Crazy Lines plugin has you covered. And with the use of grease pencil, you can even add these crazy lines to 2D objects and compositions, opening up even more possibilities for your projects.

So don't wait any longer – download the Crazy Lines plugin now and start adding some wild and zany designs to your Blender projects. Whether you're a fan of "Ed, Edd n Eddy" or just want to add some visual interest to your work, the Crazy Lines plugin has something for everyone. Boost your Blender skills and take your creativity to new heights with the Crazy Lines plugin.
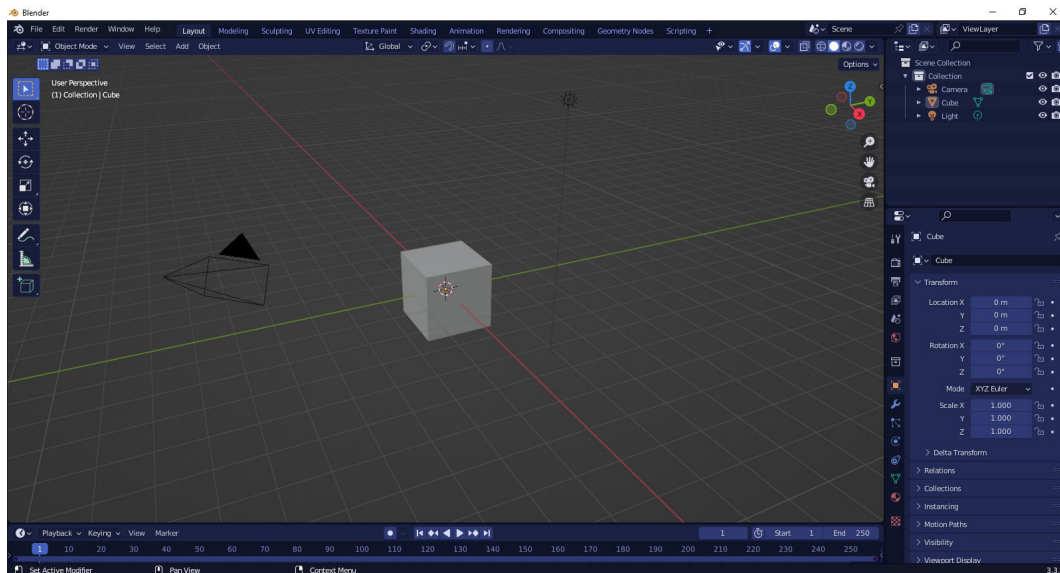

How to Add the CRAZY LINES BLENDER PLUGIN:

## 1. Download and unzip the plugin, then take note of where "CrazyLines.py" is located.

## 2. Install the plugin/addon

Open up blender

In the top menu, go to Edit > Preferences.

In the Preferences window, select the Add-ons tab. Then at the top right of the Add-ons window, click the "Install..." button.
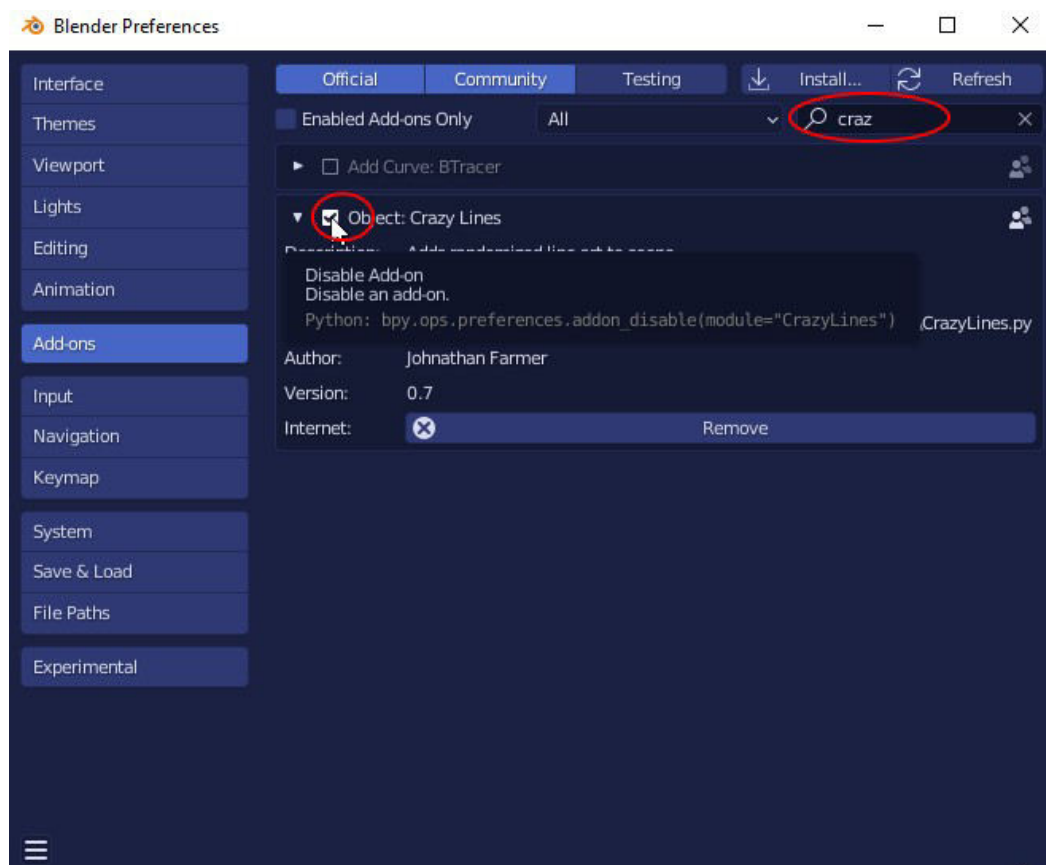

In the file browser that appears, navigate to the location where you have downloaded the addon file. Select the addon file and click the Install Add-on from File... button.

(Note: The red boxes in this image are just for personal privacy regarding files on my system.)

The addon should now be installed and available in the list of addons in the Add-ons tab. To enable the addon, search for it in the list of addons and click the checkbox next to its name.
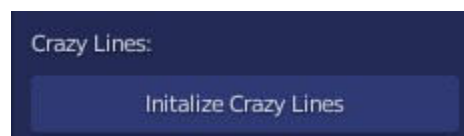

That's it! You're done with setup, now it's time for wacky lines everywhere!
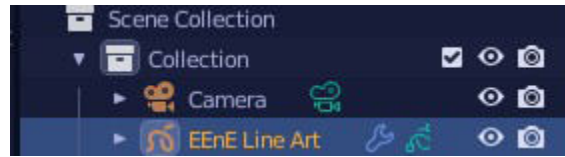

3. How To Use Crazy Lines

Crazy lines is meant to be very easy to use, to begin using Crazy Lines, look in to the right side toolbar for the scene properties

Once you're in scene properties you should see this button "Initialize Crazy Lines"

Clicking this button adds a few essentials into your scene collection, including a camera and the "EenE Line Art" object. Crazy Lines checks for if your scene already has a camera and skips doing that if one is detected, but the EenE Line art stroke is where the magic happens.

From here the Crazy Lines effect will be in effect anytime you are viewing the scene from the perspective of a camera. Crazy Lines will be generated on every visible object in the scene from the perspective of the camera. I would love to include some examples here but gif or video can not be added in a document file. Videos coming soon.

4. Customization Galore

In the next update, there will be more sliders and customization regarding noise oscillation and generation styles. This is coming soon.
